Introduction

When it comes to making good decisions regarding packaging and the environment, both you and your customers rely on the validity of sustainable packaging claims.

The EarthChoice team is committed to helping you both create and evaluate sustainable packaging messages that are legitimate and compelling.

Overview

Eco-friendly. Green. Sustainable. Good for the planet. Compostable. Biodegradable. What do these terms mean? Are they legitimate? Are they legal? How do you know?

How can you gauge if a claim is legitimate?

Here are four simple guidelines:

1. Specific and detailed

The description must state exactly what is being claimed, by how much, and compared to what.

2. Clear, prominent & easily understood

According to the FTC, "Clarity of language, relative type size and proximity to the claim being qualified, and an absence of contrary claims that could undercut effectiveness, will maximize the likelihood that the qualifications and disclosures are appropriately clear and prominent."

3. No overstatements

Claims that are not statistically significant should not be made. Further, unless recycling or composting is widely available (generally accepted to mean by at least 60% of households), it cannot be claimed without qualifying the limited extent to which recycling is available.

4. A clear basis of comparison

To claim that the manufacture of your product generates 25% fewer greenhouse gas emissions than a competitive product, you must be able to state the emissions levels for both products.

EarthChoice products provide at least one of four benefits that can help reduce the environmental footprint of our packaging: REDUCE, REUSE, RECYCLE, AND RENEW.

Start with the EarthChoice Line of Sustainable Foodservice Products

Reduce

We strive to minimize packaging, petroleum based materials and energy use across the supply chain.

Reuse

We are committed to using post-consumer recycled materials, where available to produce new products.

Recycle

We are actively engaged in projects to increase the recycling of all foodservice packaging into new manufactured products.

Renew

We utilize renewable and compostable resources.

EarthChoice is the largest sustainable product line in the U.S.A.

earthchoice

Over 85% of EarthChoice items are made in plants located in the USA and offer a smaller environmental transportation footprint compared to products imported from China.

These guidelines are supplied to assist you in determining the proper use of Pactiv products. They are based upon testing and published guidelines and are reliable in most applications. However, because every food supplier's recipes, ingredients, processes and supply chain is unique, these guidelines are not a substitute for product testing. Confirmation of product acceptability under your specific conditions of use must be done by you.

*PCR stands for post-consumer recycled material, which is material reclaimed and recovered after consumer use.

These guidelines are supplied to assist you in determining the proper use of Pactiv products. They are based upon testing and published guidelines and are reliable in most applications. However, because every food supplier's recipes, ingredients, processes and supply chain is unique, these guidelines are not a substitute for product testing. Confirmation of product acceptability under your specific conditions of use must be done by you.

*PCR stands for post-consumer recycled material, which is material reclaimed and recovered after consumer use.

EarthChoice

Reduce • Reuse • Recycle • Renew

Recycled PET (RPET) is produced from previously used post-consumer plastic products. EarthChoice uses 25% recycled content in RPET packaging. This product is recyclable in the few communities that have appropriate recycling programs.

Mineral-Filled Polypropylene (MFPP) contains an average of 50% less plastic polymers than standard polypropylene containers which reduces plastic usage.

Fiber Blend Our Fiber Blend products are made from a blend of pulp fibers. All materials in the Fiber Blend family are made from sustainable, renewable resources and are ASTM D 6868 certified and compostable in commercial facilities only, which may not exist in all areas. Not suited for home composting.

PLA (Ingeo) PLA is a natural plastic material made from corn, and is 100% annually renewable. It is best used for cold applications and has a heat tolerance of 105° F. All EarthChoice PLA products are ASTM D 6400 certified and compostable in commercial facilities only, which may not exist in all areas. Not suited for home composting.

PLA Coated Paper Hot Cups & Soup Cups (Ingeo) EarthChoice PLA Lined/Coated Paper Cups are made from 100% renewable resources and are ASTM D 6868 certified and compostable in commercial facilities only, which may not exist in all areas. Not suited for home composting.

Plastarch Material (PSM) is manufactured from renewable plant starch and contains a blend of polypropylene fillers. PSM is derived from corn, which is an annually renewable resource that can handle temperatures up to 200° F making it perfect for higher heat applications.

Recycled Polypropylene (Recycled PP) Recycled PP is produced from previously used post-consumer plastic products. EarthChoice uses a minimum of 20% recycled content in Recycled PP packaging. This product is recyclable in the few communities that have appropriate recycling programs.

Reduce • Reuse • Recycle • Renew

Reduce

We strive to minimize packaging, petroleum based materials and energy use across the supply chain.

Reuse

We are committed to using post-consumer recycled materials, where available to produce new products.

Recycle

We are actively engaged in projects to increase the recycling of all foodservice packaging into new manufactured products.

Renew

We utilize renewable and compostable resources.
