INTIMUS 8000S AUDITOR-PRO
DEGAUSSER

A short and strong pulse erases the data on the hard disk irrevocably

▶ Simple operation

▶ Floods the media with a very strong magnetic field

TOP SECRET DATA PROTECTION AND AUDIT COMPLIANCE

When degaussing, the storage media are flooded with a very strong magnetic field that far exceeds their own magnetic force, the coercivity of the hard disk. The short and strong pulse erases the data on the hard disk irrevocably. Degaussing is characterized above all by the simple operation and minimal space requirements, which also allows for its use in an office environment.

intimus sets the Standard for audit compliance with its new Auditor-Pro erasure verification system. A specially designed image capture system records the erasure of each hard disk drive or tape processed by the intimus 8000S Degausser. Using the included barcode scanner, the user records the serial number of the hard Disk or tape and associates an image of the disk or tape at the time of erasure.
